

# Jerome Thayananthajothy

Technical Lead | AI-Driven Systems Architect | AWS & Full-Stack Expert | Open Source Contributor

Colombo, Sri Lanka | [tjthavarshan@gmail.com](mailto:tjthavarshan@gmail.com) | [thavarshan.com](http://thavarshan.com)  
[linkedin.com/in/thavarshan](https://linkedin.com/in/thavarshan) | [github.com/Thavarshan](https://github.com/Thavarshan)

## Professional Summary

Technical Lead and AI-driven systems architect with more than a decade of experience building scalable platforms, modernizing full-stack architectures, and leading cloud delivery. Experienced across AI workflows, semantic search, developer tooling, and high-volume commercial systems, with a practical focus on performance, observability, and helping engineering teams ship confidently.

## Core Expertise

**Leadership:** Technical leadership, Architecture reviews, Engineering standards, Mentoring, Product thinking  
**AI & Architecture:** Generative AI, LangGraph, Semantic search, Microservices, Event-driven systems  
**Full Stack:** React, Vue, TypeScript, Node.js, Laravel, PostgreSQL  
**Cloud & Delivery:** AWS, Docker, Kubernetes, CI/CD, Observability

## Experience

|                                                                                                                                                                                                                                                                                                                                                                  |                     |

| <b>Technical Lead</b><br><i>Sino Lanka Group</i> — Colombo, Sri Lanka                                                                                                                                                                                                                                                                                            | May 2026 – Present  |
| <ul style="list-style-type: none"><li>Driving architecture direction across full-stack systems, AI capabilities, and cloud delivery.</li><li>Focusing on observability, developer ecosystems, and reliable engineering practices.</li><li>Bringing senior technical leadership across AI-enhanced infrastructure and product delivery.</li></ul>                 |                     |
| <b>Technical Lead</b><br><i>KAYA</i>                                                                                                                                                                                                                                                                                                                             | Oct 2025 – May 2026 |
| <ul style="list-style-type: none"><li>Designed dynamic AI workflow engines with LangGraph and cloud-native delivery practices.</li><li>Led distributed application work across multiple Kubernetes clusters.</li><li>Shaped Node.js, TypeScript, Laravel, PostgreSQL, and platform engineering standards.</li></ul>                                              |                     |
| <b>Technical Lead</b><br><i>Brompton Bicycle</i>                                                                                                                                                                                                                                                                                                                 | Dec 2024 – Oct 2025 |
| <ul style="list-style-type: none"><li>Built Express microservices and full-stack platform capabilities for systems serving more than 100,000 daily users.</li><li>Modernized legacy PHP services toward TypeScript and Node.js, improving performance by 40%.</li><li>Introduced standards that reduced technical debt by 30% across delivery streams.</li></ul> |                     |
| <b>Full Stack Engineer</b><br><i>NetWatch Global</i>                                                                                                                                                                                                                                                                                                             | Jul 2023 – Dec 2024 |
| <ul style="list-style-type: none"><li>Built maintainable backend services and frontend workflows for business-critical platforms.</li><li>Worked across PostgreSQL, DynamoDB, API design, and production delivery.</li></ul>                                                                                                                                     |                     |
| <b>Senior Software Engineer</b><br><i>MacroActive</i>                                                                                                                                                                                                                                                                                                            | Jun 2021 – Nov 2022 |
| <ul style="list-style-type: none"><li>Delivered full-stack product work across Laravel, JavaScript, and relational databases.</li><li>Collaborated with product and engineering teams to improve reliability and maintainability.</li></ul>                                                                                                                      |                     |
| <b>Software Engineer</b><br><i>Elegant Media</i>                                                                                                                                                                                                                                                                                                                 | Apr 2019 – Jul 2020 |
| Developed web and mobile platform features across client projects, APIs, and production support.                                                                                                                                                                                                                                                                 |                     |
| <b>Software Developer</b><br><i>Seven's Idea</i>                                                                                                                                                                                                                                                                                                                 | Jan 2018 – Mar 2019 |
| Built application features and integrations across early-stage product and client delivery work.                                                                                                                                                                                                                                                                 |                     |
| <b>Software Developer</b><br><i>Alta Vision Solar</i>                                                                                                                                                                                                                                                                                                            | Jun 2015 – Jan 2018 |
| Started in software delivery with practical engineering work across business systems and web applications.                                                                                                                                                                                                                                                       |                     |

## Selected Open-Source Work

|                                                                                                                                                            |                        |
|------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------|
| <b>Fetch PHP</b>                                                                                                                                           | 450 stars   PHP        |
| Modern PHP HTTP client inspired by JavaScript's fetch API. Async/await, streaming, SSE, middleware, RFC 7234 caching, and full PSR-7/18 compliance.        |                        |
| <b>Filterable</b>                                                                                                                                          | 196 stars   PHP        |
| Enhance Laravel queries with adaptable, customisable filters and intelligent caching to improve both performance and functionality.                        |                        |
| <b>phpvm</b>                                                                                                                                               | 162 stars   Shell      |
| Simple PHP version manager for MacOS and Linux.                                                                                                            |                        |
| <b>Comet</b>                                                                                                                                               | 158 stars   TypeScript |
| A cross-platform desktop app powered by FFmpeg for easy, beautiful media conversion.                                                                       |                        |
| <b>Matrix</b>                                                                                                                                              | 60 stars   PHP         |
| Bringing JavaScript-style async to PHP! Manage asynchronous tasks with ease using a modern, fiber-powered API for seamless concurrency and error handling. |                        |

## Product Work

|                                                                                                                                                                                                        |                     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>Honeymelon</b>                                                                                                                                                                                      | Founder and builder |
| A premium Apple Silicon macOS app for fast, reliable media conversion, built as a focused commercial product.                                                                                          |                     |
| <ul style="list-style-type: none"><li>• Product-led work covering UX, packaging, performance, and release quality.</li><li>• Connects engineering craft with market-facing product judgment.</li></ul> |                     |

## Education

|                                                           |                     |
|-----------------------------------------------------------|---------------------|
| <b>BSc Computer Systems Engineering</b>                   | Sep 2022 – Jun 2023 |
| <i>University of Sunderland</i>                           |                     |
| <b>Higher National Diploma in Software Engineering</b>    | Aug 2020 – Mar 2022 |
| <i>ICBT</i>                                               |                     |
| <b>Graduate Diploma in Telecommunications Engineering</b> | Feb 2015 – Mar 2019 |
| <i>IESL College of Engineering</i>                        |                     |

## Certifications

|                                                                                                                              |  |
